Executive Summary

Identifying and addressing unmet health priorities of local communities is a core aspect of the care provided by hospitals and health systems across the U.S. The Affordable Care Act (ACA) formalized this role by mandating tax-exempt hospitals mandating hospitals to conduct a Community Health Needs Assessment (CHNA) every three years and implement strategies focused on emergent priorities from the assessment. This assessment is central to non-profit hospitals and health systems' community benefit and social accountability planning. By better understanding the service needs and gaps in a community, hospitals and health systems can develop implementation plans — also mandated by the ACA — that more effectively respond to high priority needs.

Penn Medicine Princeton Health is located in central New Jersey in Plainsboro, Middlesex County. It sits within close proximity to New York City and Philadelphia, as well as Trenton, New Jersey's state capital.

Since 2012, Penn Medicine Princeton Health (Princeton Health) has completed multiple needs assessments (2012, 2015, 2018, 2021) in accordance with the federal requirements and in coordination with community members and community-based organizations. Priority areas identified in the previous two community health needs assessments (2018, 2022) included chronic disease, obesity, healthy eating and active living; behavioral health; health care access; maternal and child health; and healthy aging. Following each assessment, Princeton Health and its partners developed and implemented a range of strategies to address these identified needs.

PROCESS, APPROACH, METHODOLOGY

Improving the health of a community is essential to enhancing the quality of life for residents in the region and supporting future social and economic well-being. In 2024, Princeton Health collaborated with the Health Care Improvement Foundation (HCIF) a non-profit public health organization based in Philadelphia, to conduct a CHNA to explore the needs and priorities of community members across Princeton Health's primary, secondary, and tertiary service areas located primarily within Mercer, Middlesex, and Somerset counties.

Featuring qualitative and quantitative data gathered throughout 2023 and 2024, this report provides an overview of key findings and potential solutions for future implementation. The CHNA was guided by Princeton Health's Community Wellness Program team, who formed and led a Community representing a diverse cross section of fields and sectors. The Community Wellness Program's approach to the CHNA reflects the program's foundational focus of addressing key social drivers that influence the community's ability to promote and support the healthiest and highest quality of life for all. Although Princeton Health's service area reflects specific ZIP codes within these counties, publicly available health indicators were reported at the county level. Princeton Health is committed to supporting and being responsive to the identified community health needs of patients within the primary, secondary, and tertiary service areas of these and additional counties.

Quantitative data were acquired from local, state and federal sources. A data analysis consultant compiled, analyzed, and aggregated over 85 health indicators encompassing data on access to care, community demographic characteristics, chronic disease and health behaviors, maternal health, mental and behavioral health, social and economic conditions, substance use and more. To develop a comprehensive picture of the full landscape of community health, data were compiled from over 30 sources.

Qualitative data were collected through two mechanisms:

- Princeton Health organized and facilitated guided discussions with community residents and service providers and interviews with community stakeholders. Community discussions were conducted with emergency medical service providers, faith-based leaders, LGBTQ+ community members, parents, patient and family advocates, public health officers, older adults, and organizations focused on maternal and child health. Interviewees included leaders in the fields of food security, housing, transportation, and mental and behavioral health.
- To ensure a broader reach and to hear from community members beyond the facilitated discussions, a community health survey was fielded both online and on paper to individuals who live and/or work/volunteer in Mercer, Middlesex, and Somerset counties. The survey received 528 responses.

PRIORITY HEALTH NEEDS

HCIF's analysis of the assessment's findings resulted in the development of a list of priority health needs (shown below) which Princeton Health will use to develop an implementation plan outlining how they will address these needs both individually and in collaboration with partners.

Management

Penn Medicine Princeton Health Profile

Penn Medicine Princeton Health (Princeton Health) is one of the most comprehensive healthcare systems in New Jersey. First opened in 1919, Princeton Health currently provides acute care hospital services through Princeton Medical Center; behavioral healthcare through Princeton House Behavioral Health; in-home nursing, rehabilitation, and hospice care through Penn Care at Home Princeton; primary and specialty care through Princeton Medicine Physicians; ambulatory surgery and wellness services. Since May 2012, Princeton Medical Center has been located in a state-of-the-art facility in Plainsboro Township which offers services in areas such as cancer, cardiac and pulmonary care, critical care, emergency, imaging and outpatient laboratory services, maternal and newborn care, neuroscience, surgery, sleep disorders, pediatric care, and eating disorders. Princeton Health also houses the Zufall Community Health Center which provides adult and pediatric care to uninsured and underinsured residents and maintains a partnership with The Children’s Hospital of Philadelphia (CHOP). In January 2018, Princeton Health and its affiliates joined the University of Pennsylvania Health System (UPHS), one of the world’s leading academic medical centers.

As part of its commitment to the community, Princeton Health established the Community Wellness Program to offer a dynamic curriculum of comprehensive health education, screenings, and support facilitated by its outstanding physicians, nurses, and health professionals. The Community Wellness Program hosts over 2,000 programs a year, reaching approximately 55,000 community members.

The Program offers an equitable, dynamic array of innovative health- and lifestyle-related programming at little or no cost to address the key social drivers that influence the community’s ability to promote and support the healthiest and highest quality lives for all. The Program also works closely with leading national organizations — the American Cancer Society, the American Heart Association, and the Susan G. Komen Breast Cancer Foundation, among others — to raise funds, heighten awareness, and bring important health programming to the community it serves.

Princeton Health is dedicated to promoting healthy living at every stage of life and to enhancing quality of life by addressing the unique needs of women, men, seniors, children, adolescents, and diverse populations.

Community Health Needs Assessment Background

Penn Medicine Princeton Health (Princeton Health) is a 319-bed nonprofit, academic medical center located in Plainsboro, New Jersey that offers a range of healthcare services, including: acute care hospital services, behavioral healthcare, home care, hospice care, ambulatory surgery, and fitness and wellness services. Penn Medicine Princeton Medical Center is a university hospital affiliate of Rutgers Robert Wood Johnson Medical School, and is also a clinical research affiliate of The Cancer Institute of New Jersey. The hospital opened in 2012 and serves the central and western regions of New Jersey, including Mercer, Middlesex, and Somerset counties, as well as portions of Monmouth, Burlington, Hunterdon counties and Bucks County in Pennsylvania.

PURPOSE

Identifying and addressing unmet health needs of local communities is a core aspect of the care provided by hospitals and health systems across the U.S. The Affordable Care Act (ACA) formalized this role by mandating that tax-exempt hospitals conduct a Community Health Needs Assessment (CHNA) every three years and implement strategies focused on emergent priorities from the assessment. Federal requirements for the CHNA include:

- A definition of the community served by the facility and a description of how the community was determined
- A description of the process and methods used to conduct the CHNA
- A description of how the facility solicited and took into account input received from persons who represent the broad interests of the community it serves
- A prioritized description of the significant health needs of the community identified through the CHNA and a description of the process and criteria used in identifying certain health needs as significant and prioritizing those needs
- A description of resources potentially available to address the significant health needs identified through the CHNA

This assessment is central to not-for-profit hospitals and health systems' community benefit and social accountability planning. By better understanding the service needs and gaps in a community, an organization can develop implementation plans — also mandated by the ACA — that more effectively respond to high priority needs.

SCOPE & APPROACH

The 2024 CHNA was primarily led by Princeton Health's Community Wellness Program team, in coordination with a Community Advisory Board (CAB). These two entities worked collaboratively to understand the state of health across the region from pre-conception to end-of life. Their approach prioritized equity and community engagement by recruiting diverse representation on the CAB and in community discussions. The core geographic scope of the assessment included Mercer, Middlesex, and Somerset counties. Similar to previous CHNAs, Princeton Health and HCIF gathered data through a mixed methods approach — analyzing and integrating both quantitative and qualitative data as a means to developing a broad, but robust, picture of the region's current community health status and needs, as well as the community's vision for the future.

Community Advisory Board

During the early planning stages for this assessment, Princeton Health's Community Wellness team convened a "Community Advisory Board (CAB)," comprised of community organization representatives who supported key aspects of the project. In September 2023, the team reached out to its extensive community partner network with an invitation to participate in the CAB. This outreach resulted in 93 representatives joining the CAB, which created a diverse, well-informed, and engaged group. Meetings were held monthly — and took place both virtually and in-person. The CAB was integral to the development of survey collection methods and tools, as well as identifying which groups and individuals should be part of the community discussions and interviews. Additionally, the CAB featured sub-committees focused on topics such as: chronic disease management/healthy eating/active living, maternal and child health, the aging population, mental health and substance use, and health access. CAB members joined sub-committees through self-selection, based on expertise and knowledge in specific areas.

SUMMARY OF PREVIOUS CHNA

Princeton Health's previous CHNA was conducted in 2021 during the COVID-19 pandemic. The assessment's data collection processes were significantly impacted by limitations on the ability to collect both quantitative and qualitative data. COVID-19 also was identified as a major concern by participants in the data collection process. Additionally, a national focus on racial equity coincided with data collection for the CHNA, which impacted the design of data collection instruments and feedback from interviews, focus groups, and survey responses.

Despite this context, the CHNA was guided by a collaborative and participatory process that included focus groups and interviews with a variety of community members, partners, and organizations. A survey was also fielded with members of the community from Mercer, Middlesex and Somerset counties.

Key themes from the 2021 CHNA included: 1.) despite areas of affluence and high education levels in the service area, significant disparities in income, education, and housing were detected among minority communities; 2.) for seniors and individuals among the LGBTQ+ community, health concerns, housing, transportation, and access to healthcare were some of the top themes; 3.) there is a high prevalence, range, and severity of mental health issues in the service area; 4.) the community described challenges associated with chronic disease issues, and 5.) the community identified several barriers or concerns with health care access and utilization. Based on these themes, the following priorities were identified in the 2021 CHNA:

Priority 1: Chronic Disease, Obesity, and Healthy Eating and Active Living (HEAL)

Priority 2: Behavioral Health

Priority 3: Health Care Access

Priority 4: Maternal Child Health

Priority 5: Elder Health

Non-profit hospitals are required to develop an implementation plan in response to priorities identified by the community health needs assessment. In response to these priorities, the following strategic initiatives were included in Princeton Health's 2021 implementation plan. Note that these are exemplars and are not inclusive of all initiatives.

Priority 1: Chronic Disease, Obesity, and Healthy Eating and Active Living (HEAL)

- Conduct ongoing community events, including nutrition and exercise programs, health screenings, lectures, and webinars to raise awareness regarding obesity and chronic diseases.
- Utilize partnerships with fitness centers to identify special population needs and collaborate on programming.
- Initiate Stroke Community Wellness program with a focus on risk factor modification, chronic disease management and stroke recognition.
- Initiate partnership with local food banks and farmers' markets to provide fresh produce and education on healthy food/meal choices.
- Strengthen existing and explore new community partnerships to address social determinants and public health concerns.

Priority 2: Behavioral Health

- Address behavioral health stressors among first responders (police, fire, EMS, corrections officers, etc.).
- Address need for substance use treatment in the community by providing inpatient treatment for co-occurring mental health and substance use disorders and acute outpatient treatment for adolescents, young adults, and adults.
- Reduce barriers to treatment, such as maintaining telehealth and providing transportation.
- Provide behavioral health Community Education programs to educate and raise awareness of mental health, substance use, and medication safety services available to the community and to help reduce stigma.
- Respond to community need for trauma services by offering mental health first aid training for children, adults, and first responders.

Priority 3: Health Care Access

- Expand primary care practice hours and virtual appointments for home-bound patients.
- Expand insurances accepted by employed practices.
- Create awareness and increase use of the Patient Portal to enable access to electronic medical records, services, and messaging between patients and their care teams.
- Utilize new language interpretive services to facilitate access for all patients.
- Provide subsidized transportation services for the elderly and disabled.
- Provide culturally specific community education outreach and screenings and offer these services in other languages as needed.
- Add a community navigator who will serve as a connection between the patient and community resources.

Priority 4: Maternal and Child Health

- Enhance the Pelvic Wellness Program and women's health-related programming.
- Conduct free monthly prenatal breastfeeding classes and breastfeeding support groups.
- Follow up with discharged mothers and babies by a certified lactation consultant.
- Offer post-partum support services such as home visits, text messaging, lactation hotline, postpartum adjustment support group and outpatient lactation visits.
- Offer Bright Beginnings and Daddy Boot Camp to improve family support post-delivery.
- Offer Heart Safe Motherhood Program to improve health outcomes and experience of post-partum women with hypertension.

Priority 5: Elder Health

- Provide community, family and health care provider education directed towards seniors such as palliative care, hospice programs, medication and fall safety, chronic diseases, and mental health.
- Incorporate telehealth assistance for seniors to improve access to care.
- Participate in Age-Friendly Health System Action Community.
- Focused programming to address goals of care for patients transitioning to skilled nursing facilities.
- Provide education in senior housing about navigating the health care system and resources.

Community Health Indicators

Quantitative indicators, from various sources, at various geographic levels, are critical to understanding and representing the landscape of health and wellness of a certain population or region.

Quantitative data for this assessment were compiled based on indicators collected from Princeton Health's 2021 CHNA, identified focus areas and priorities, and availability of high quality and granular data. HCIF, in coordination with a contracted expert data analyst, compiled, analyzed, and aggregated over 85 health indicators from varied data sources.

Essential demographic and population data was gathered from the Census Bureau's American Community Survey (ACS), which enabled the calculation of rates and proportions for various indicators. ACS data was particularly useful for deriving rates that required total population values (e.g., total population, population by age group, population by race/ethnicity, etc.). When aggregating data to the regional level (combining three counties), data was calculated using weighted values, with weights based on the size of the affected population in each county (e.g., age groups such as 65+, 18-64, or total population). Data was either manually typed into an excel file, downloaded from websites into an excel file, or taken from the tidycensus (1.6.7) package (a product that uses the Census Bureau Data API) in R (4.4.1) and RStudio (2024.09.0). The excel files were then all merged and appended in RStudio using the tidyverse package (Version 1.3.0).

In the subsequent section, data are presented in three county-level profiles (Mercer, Middlesex, and Somerset). Additionally, a "Summary Health Measures" table is included to serve as a mechanism for comparison between all three counties, as well as the state of New Jersey. Displaying data in multiple ways allows for greater understanding of local and regional needs, and how those needs compare to the state. Where available and reliable, certain indicators are broken down by race and ethnicity, and by geography, to show relevant variation.

Although data are reported at a county level due to the availability of publicly reported data, Princeton Health's primary, secondary, and tertiary service areas may represent specific zip codes and smaller areas within these counties.

Mercer County

Community discussion participants shared that Mercer County is culturally diverse, with a strong sense of community.

Source: CDC WONDER and National Center for Health Statistics, 2018-2022

RACE/ETHNICITY

Because this area is culturally and linguistically diverse, community discussion participants shared that this can present challenges with regards to accessing and utilizing services — indicating the need for more culturally and language-inclusive providers, resources and engagements.

LANGUAGE

The most common language spoken (other than English) is Spanish (16.3%).

AGE DISTRIBUTION

The largest proportion of residents are between the age of 45 to 59 years old.

SOCIAL VULNERABILITY INDEX*

*The Social Vulnerability Index (SVI), refers to a measure, developed by the CDC, which analyses demographic and socioeconomic factors (such as poverty, lack of access to transportation, and crowded housing) that adversely affect communities. The index generates a score between 0 and 1, with lower numbers indicating less social vulnerability and vice versa.

Mercer County

Where significant and in line with community feedback, variations in available indicators between specific communities and the overall county are noted

CHRONIC DISEASE & HEALTH BEHAVIORS

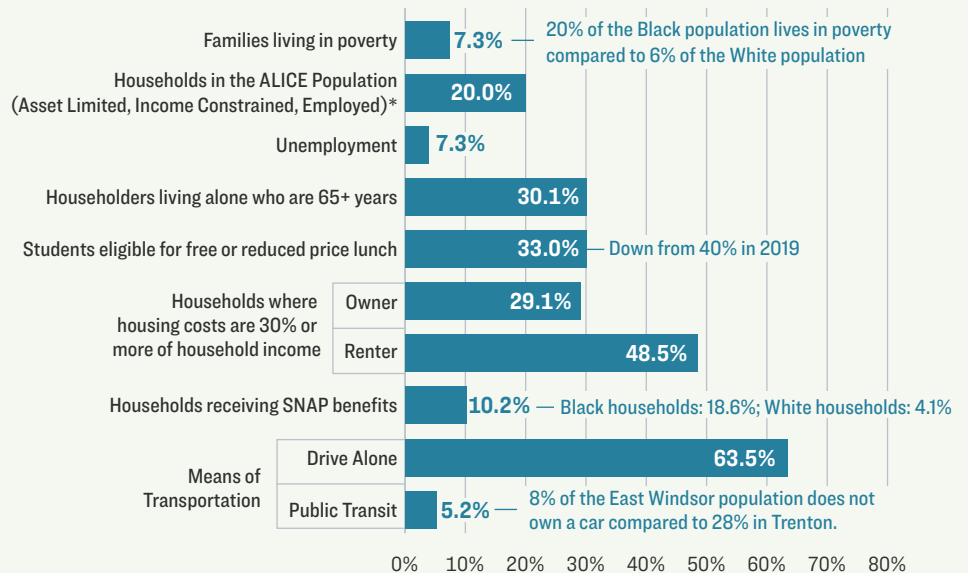

Asthma emergency department visit rate (per 10,000) is 132.8 for the Black population compared to 19.1 for the White population.

SOCIAL & ECONOMIC CONDITIONS

Community discussion participants shared that the cost of living in Mercer County is a challenge — and likely significantly impacts older adults and their ability to age in place (i.e. Robbinsville, West Windsor, Hightstown, Trenton).

Disparities between various communities were mentioned during the community discussions — particularly when referring to Trenton in comparison to other parts of Mercer County.

*Developed by the United Way, ALICE captures the population of households that earn more than the Federal Poverty Level, but not enough to afford the cost of “basics” in their area (i.e. housing, child care, food, transportation, health care, etc.)

MATERNAL HEALTH

Down from 63.0% in 2017

6.4 Infant mortality rate per 1,000 births (Up from 5.7 in 2017)

MENTAL & BEHAVIORAL HEALTH

Down from 19.3% in 2017

9.7 Suicide mortality rate (per 100,000)

11% Adults reporting poor mental health 14 or more days

Mercer County

ACCESS TO CARE

Although many community discussion participants shared that their communities are walkable and have access to health care services and hospitals, they also shared that transportation is a barrier for many people in certain areas (i.e. East Windsor, West Windsor, Princeton, Trenton, Highstown) — especially those who do not have cars (which includes older adults who can no longer drive and young people who are choosing not to own cars).

Some participants at a discussion in Robbinsville indicated that their communities do not have enough health care providers or hospitals/ specialists and residents are leaving the area to travel to other areas such as Bordentown, Cherry Hill, or even Pennsylvania.

1,110 to 1

Ratio of population to primary care physicians

280 to 1

Ratio of population to mental health providers**

** This indicator pulls data from a national provider registration list — which may include providers who are not currently practicing and therefore, may result in an overestimation. It is recommended to use this indicator as a single point of information, and additional data should be gathered to develop a more thorough understanding of the state of mental health care access in a specific area.

OB-GYN Open House – ForreSTALL Village

Middlesex County

Community conversation participants shared that Middlesex County strengths include strong family support, ample community services, and diverse cultures.

 4. COVID-19
 5. Stroke
- All cause mortality (per 100,000) **650.6**

SOCIAL VULNERABILITY INDEX*

*The Social Vulnerability Index (SVI), refers to a measure, developed by the CDC, which analyses demographic and socioeconomic factors (such as poverty, lack of access to transportation, and crowded housing) that adversely affect communities. The index generates a score between 0 and 1, with lower numbers indicating less social vulnerability and vice versa.

RACE/ETHNICITY

40% of residents are non-Hispanic White, with Asians making up the next largest population, at 24.9%. 68.9% of Plainsboro Township residents identify as minorities.

LANGUAGE

The most common language spoken (other than English) is Spanish (17.9%).

AGE DISTRIBUTION

The largest proportion of residents are between the age of 25 to 44 years old.

Middlesex County

Where significant and in line with community feedback, variations in available indicators between specific communities and the overall county are noted

CHRONIC DISEASE & HEALTH BEHAVIORS

SOCIAL & ECONOMIC CONDITIONS

*Developed by the United Way, ALICE captures the population of households that earn more than the Federal Poverty Level, but not enough to afford the cost of “basics” in their area (i.e. housing, child care, food, transportation, health care, etc.)

Middlesex County

MATERNAL HEALTH

4.1 Infant mortality rate per 1,000 births (Up from 2.9 in 2017)

MENTAL & BEHAVIORAL HEALTH

12.2% of adults in Woodbridge Township reported smoking, higher than the overall county average.

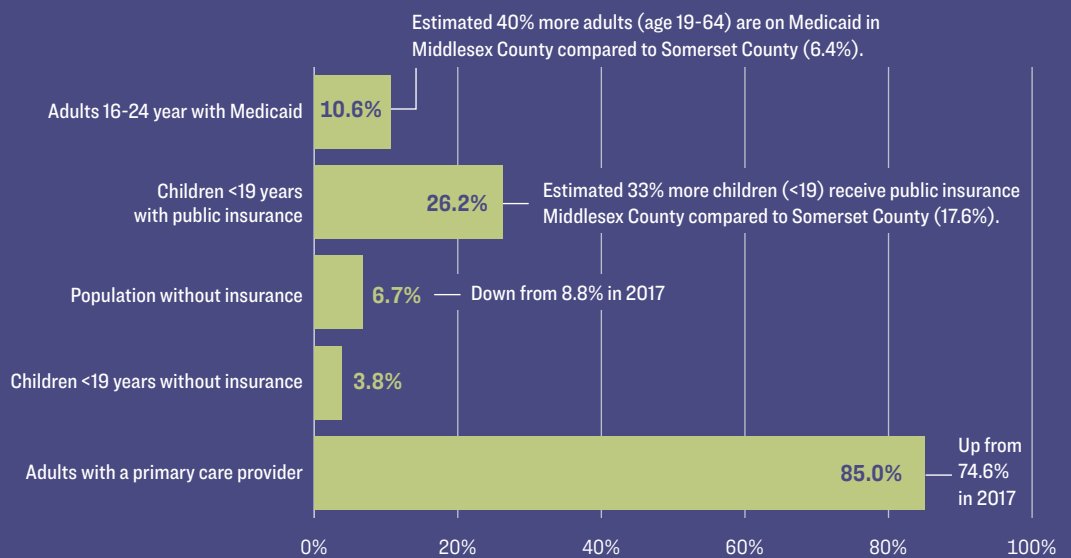

6.7 Suicide mortality rate (per 100,000) **13%** Adults reporting poor mental health 14 or more days

ACCESS TO CARE

Long wait times was shared as a barrier to health access by community conversation participants.

Ratio of population to primary care physicians
1,110 to 1

Ratio of population to mental health providers*
490 to 1

* This indicator pulls data from a national provider registration list — which may include providers who are not currently practicing and therefore, may result in an overestimation. It is recommended to use this indicator as a single point of information, and additional data should be gathered to develop a more thorough understanding of the state of mental health care access in a specific area.

Somerset County

SOCIAL VULNERABILITY INDEX*

*The Social Vulnerability Index (SVI), refers to a measure, developed by the CDC, which analyses demographic and socioeconomic factors (such as poverty, lack of access to transportation, and crowded housing) that adversely affect communities. The index generates a score between 0 and 1, with lower numbers indicating less social vulnerability and vice versa.

Community conversation participants shared that Somerset County is culturally diverse, with a strong sense of community comprised of engaged residents, and that one of its strengths is its central location to other parts of the region such as Philadelphia and New York City.

ESTIMATED POPULATION

LEADING CAUSES OF DEATH

1. **Cancer**
 2. **Heart Disease**
 3. **COVID-19**
 4. **Unintentional Injury**
 5. **Stroke**
- All cause mortality (per 100,000) **591.9**

RACE/ETHNICITY

52.6% of residents are non-Hispanic White, with Asian residents making up the next largest population at 19%. Within Montgomery Township, 49.3% of residents identify as minorities and there is a growing South Asian population. Community conversation participants indicated the need to expand and diversify services to engage with this specific population — particularly health services.

LANGUAGE

Other than English, the most common language spoken is Spanish (12.1%). 34% of Montgomery Township residents are foreign-born.

AGE DISTRIBUTION

The largest proportion of residents are between the age of 45 to 64 years old.

Somerset County

Where significant and in line with community feedback, variations in available indicators between specific communities and the overall county are noted

CHRONIC DISEASE & HEALTH BEHAVIORS

SOCIAL & ECONOMIC CONDITIONS

Community conversation participants shared the lack of transportation and walkability in Somerset County — specifically Montgomery Township — is a barrier for residents.

*Developed by the United Way, ALICE captures the population of households that earn more than the Federal Poverty Level, but not enough to afford the cost of “basics” in their area (i.e. housing, child care, food, transportation, health care, etc.)

Somerset County

MATERNAL HEALTH

Infant mortality rate per 1,000 births: Data unavailable.

MENTAL & BEHAVIORAL HEALTH

7.6 Suicide mortality rate (per 100,000) **11%** Adults reporting poor mental health 14 or more days

ACCESS TO CARE

Community conversation participants shared that it's a growing area but the community lacks the necessary resources to serve population — specifically as it related to EMS, health centers, police department and health department (i.e. Montgomery Township)

Ratio of population to primary care physicians
910 to 1

Ratio of population to mental health providers**
340 to 1

** This indicator pulls data from a national provider registration list — which may include providers who are not currently practicing and therefore, may result in an overestimation. It is recommended to use this indicator as a single point of information, and additional data should be gathered to develop a more thorough understanding of the state of mental health care access in a specific area.

It is known that a person's health can vary based on their place of birth. Access to services and care, income, mortality rates, demographics, and more can vary across every neighborhood, township, county, and state — impacting the health of residents. Although Princeton Health's primary, secondary, and tertiary service areas may reflect a smaller footprint than the full counties, detailed data are provided for Mercer, Middlesex, and Somerset Counties, as well as New Jersey. Understanding these variations can offer greater insight into specific needs and support health care organizations, service providers, and community leaders with necessary information for identifying gaps in care, program planning, outreach, and targeted services.

SUMMARY HEALTH MEASURES

| | | New Jersey | Mercer | Middlesex | Somerset |
|---|--|------------|----------|-----------|-----------|
| General | Estimated Population | 9,249,063 | 383,732 | 860,147 | 344,978 |
| | Median household income | \$97,126 | \$92,697 | \$105,206 | \$131,948 |
| | Social Vulnerability Index* | N/A | 0.65 | 0.55 | 0.1 |
| | All-cause mortality (per 100,000) | 701.2 | 732.6 | 650.6 | 591.9 |
| | Years of potential life lost before 75 - All races/ethnicities | 6,500 | 7,400 | 5,500 | 4,400 |
| | Years of potential life lost before 75 - White | 5,946 | 5,900 | 6,900 | 4,900 |
| | Years of potential life lost before 75 - Black | 11,489 | 14,500 | 8,100 | 8,400 |
| | Years of potential life lost before 75 - Asian | 2,553 | 2,500 | 2,500 | 1,700 |
| | Years of potential life lost before 75 - Hispanic | 5,684 | 7,300 | 5,400 | 3,900 |
| Chronic Disease & Health Behaviors | Adults with asthma | 8.9% | 9.1% | 5.8% | 6.0% |
| | Adults with obesity | 29.8% | 28.9% | 28.7% | 30.1% |
| | Adults with diabetes | 10.8% | 9.4% | 12.6% | 8.7% |
| | Adults with high blood pressure | 31.1% | 31.1% | 29.5% | 26.2% |
| | Cancer incidence rate (per 100,000) | 536.2 | 530.5 | 488.7 | 521.4 |
| | Mammography screening | 76.2% | 67.5% | 83.4% | 74.8% |
| | Heart disease mortality rate (per 100,000) | 157.9 | 168.50 | 151.8 | 121.4 |
| | Physical inactivity | 23.3% | 20.8% | 21.2% | 13.9% |
| Cancer | Cancer incidence rate (per 100,000) | 536.2 | 530.5 | 488.7 | 521.4 |
| | Breast cancer incidence rate (per 100,000) | 187.8 | 166 | 177.9 | 208.1 |
| | Mammography screening | 76.2% | 67.5% | 83.4% | 74.8% |
| | Cervical cancer incidence rate (per 100,000) | 7.5 | 6.9 | 4.9 | 4.8 |
| | Colorectal cancer incidence rate (per 100,000) | 39.9 | 34.8 | 35.5 | 34.2 |
| | Colorectal cancer screening | 71.6% | 71.8% | 66.3% | 73.2% |
| | Lung cancer incidence rate (per 100,000) | 46.5 | 44.4 | 40.9 | 36.9 |
| | Prostate cancer incidence rate (per 100,000) | 147.5 | 161 | 148 | 144 |

*The Social Vulnerability Index (SVI), refers to measure, developed by the CDC, which analyses demographic and socioeconomic factors (such as poverty, lack of access to transportation, and crowded housing) that adversely affect communities. The index generates a score between 0 and 1, with lower numbers indicating less social vulnerability and vice versa.

SUMMARY HEALTH MEASURES

| | | New Jersey | Mercer | Middlesex | Somerset |
|---|--|------------|-----------|-----------|----------|
| Maternal Health | Births with prenatal care in the first trimester | 72.5% | 59.2% | 72.7% | 75.60% |
| | Births with no prenatal care | 1.7% | 2.0% | 1.1% | 1.0% |
| | Preterm births | 9.3% | 9.50% | 9.1% | 8.30% |
| | Infant mortality rate (per 1,000 births) | 3.5 | 6.4 | 4.1 | N/A |
| | Low birth weight births | 7.8% | 8.3% | 8.0% | 8.2% |
| Mental & Behavioral Health | Adults who reported poor mental health 14 or more days | 10.0% | 11.0% | 13.0% | 11.0% |
| | Suicide mortality rate (per 100,000) | 7.6 | 9.7 | 6.7 | 7.6 |
| | Ratio of population to mental health provider** | 380 to 1 | 280 to 1 | 490 to 1 | 340 to 1 |
| | Adult binge drinking | 15.4% | 12.4% | 10.2% | 13.1% |
| | Adult current smokers | 10.4% | 8.1% | 7.0% | 4.7% |
| | Youth who report feeling disconnected - All races/ethnicities | 11.7% | 10% | 8.1% | 7.5% |
| | Youth who report feeling disconnected - White | 8.6% | | | |
| | Youth who report feeling disconnected - Black | 17.4% | | | |
| | Youth who report feeling disconnected - Hispanic | 14.9% | | | |
| Access to Care | Adults 16-24 year with Medicaid | 13.2% | 13.0% | 10.6% | 6.4% |
| | Children <19 years with public insurance | 32.4% | 33.4% | 26.2% | 17.6% |
| | Population without insurance | 7.4% | 6.9% | 6.7% | 5.60% |
| | Children <19 years without insurance | 4.1% | 3.7% | 3.8% | 3.8% |
| | Adults with a primary care provider | 82.6% | 86.9% | 85.0% | 88.00% |
| | Ratio of Population to Primary Care Physicians | 1280 to 1 | 1110 to 1 | 1110 to 1 | 910 to 1 |
| Social & Economic Conditions | Families living in poverty | 6.9% | 7.3% | 6.1% | 3.4% |
| | Households in the ALICE population (Asset Limited, Income Constrained, Employed)*** | 26.0% | 20% | 26.0% | 20.0% |
| | Unemployment | 4.4% | 3.9% | 4.1% | 3.8% |
| | Householders living alone who are 65+ years | 27% | 30.1% | 23.8% | 22.8% |
| | Students Eligible for Free or Reduced Price Lunch | 34.0% | 33.0% | 32.0% | 20.0% |
| | Households where housing costs are 30% or more of household income - Owner with mortgage | 32.8% | 29.1% | 33.3% | 28.1% |
| | Households where housing costs are 30% or more of household income - Renter | 48.3% | 48.5% | 43.7% | 45.0% |
| | Households receiving SNAP benefits | 9.5% | 10.2% | 8.0% | 4.1% |
| | Rate of grocery stores and supermarkets (per 100,000) | 26.1 | 29.9 | 25.3 | 17.9 |
| | Food insecurity | 10.7% | 9.7% | 9.3% | 7.20% |
| | Means of transportation - Drive alone | 65.4% | 63.5% | 64.9% | 68.5% |
| | Means of Transportation - Public transportation | 9.0% | 5.2% | 7.3% | 3.7% |

**This indicator pulls data from a national provider registration list — which may include providers who are not currently practicing and therefore, may result in an overestimation. It is recommended to use this indicator as a single point of information, and additional data should be gathered to develop a more thorough understanding of the state of mental health care access in a specific area.

*** Developed by the United Way, ALICE captures the population of households that earn more than the Federal Poverty Level, but not enough to afford the cost of “basics” in their area (i.e. housing, child care, food, transportation, health care, etc.)

Community Contributions

An essential complement to the quantitative health indicators is qualitative data which capture the perspectives, priorities, and ideas of those who live, learn, work, and play within a health system's service area.

To meaningfully reflect the unique experiences and specific needs of various communities within Princeton Health's service area, the approach to gathering qualitative data was grounded in mixed methods which incorporated focused discussions with priority groups, key leader interviews, and a community survey, as well as secondary sources.

The graphic below summarizes the major components of community input for the report:

COMMUNITY SURVEY

A community survey was developed by a Community Advisory Board (CAB) comprised of representatives from numerous community-based organizations, partners, non-profits and businesses in Princeton Health's service area. These represent organizations with direct contact with community members, such as social service groups, faith-based organizations, school district representatives and health officers. The CAB developed the survey in coordination with Princeton Health's Community Wellness Program team members based on review of previous surveys and health information the CAB prioritized for collection.

METHODOLOGY

The survey was conducted both online and on paper, in English and Spanish. It was distributed by Princeton Health and through representatives of the CAB. The survey included questions about the health of the community in which the participant lives, works, or volunteers, strengths of the community, top health concerns, access to health care services, community health priorities, health coverage and information, and demographic information. The survey can be found in the Appendix, page 55. In total, 553 surveys were completed, with 528 included in final analysis based on inclusion criteria. Only survey respondents who either lived or worked in the Princeton Health service area were included. Similar to the Community Data methodology, data were merged and appended in RStudio (2024.09.0) using the tidyverse package (Version 1.3.0).

65% of survey respondents represent Mercer County, while 28.4% represent Middlesex and 6.6% Somerset. 47.3% of survey respondents are 65 and older and 67.4% are female. The survey participants tend to be older than the overall New Jersey population in the same age group (16.5%). 69.7% of the survey respondents are white, 6.4% African American, and 5.9% South Asian, while 56% of the New Jersey population are white, 12.4% African American, and 9.8% Asian. Additionally, 65.5% of the respondents indicated they are college graduates or above, while 43.4% of New Jerseyans are college educated or higher.

Although the survey was distributed to a wide array of community groups and representatives, the survey respondents tend to be older, more educated, and less diverse than the overall Princeton Health service area. However, the results are combined with findings from qualitative feedback from the community, including community discussions, key informant interviews and other sources to develop a well-rounded view of the Princeton Health service area's health needs and priorities.

Key findings from the community survey are provided in combination with interview and community discussions results below. Note: only the top responses for each question are featured in the "Key Findings" — for the full survey analysis, and survey tool, refer to the Appendix, page 55.

Survey Repondents Characteristics:

COMMUNITY GROUP DISCUSSIONS AND INTERVIEWS

Robust community feedback was gathered through community group discussions, key informant interviews, and conversations with Princeton Health representatives. Two representatives from the Princeton Health Community Wellness team, Deb Millar and Craig Harley, facilitated the discussions with support from additional team members.

METHODOLOGY

Through a collaborative process with the CAB, several priority health topics were identified. The CAB members then voted for the topics which they felt to be of highest priority and a list of topic areas were developed which drove the qualitative discussions, as well as identified specific spotlight topics. Ultimately the topics that were chosen of highest importance, included: community services and support, maternal health, transportation and access to services, mental and behavioral health, LGBTQ+ health, and older adults. Based on these priorities, the CAB determined which organizations and community members to engage in further discussion.

Participants in the qualitative discussions were selected based on their knowledge and relationship with the community they represent. Discussions were limited to invitees and were hosted both virtually and in-person. Participants were not incentivized for their participation, providing evidence of the deep engagement and commitment by participants to provide feedback on behalf of their community. The discussions generally lasted 60 minutes. Discussion topics included: strengths and concerns in the community, health challenges, vulnerable populations, access to healthcare, programs or services to address identified challenges, and a vision of the community in the future. In total, 114 community members and representatives participated in 21 discussion groups and interviews.

To review the final discussion guide, refer to the Appendix, page 101.

| Community Group Discussions | # of Participants | Key Leader Interviews | # of Interviewees |
|--|-------------------|---|-------------------|
| Breastfeeding Support Group | 9 | Greater Mercer Transportation Management Association (TMA) | 2 |
| Bright Beginnings | 8 | Mercer County Food Security Leaders | 5 |
| Central Jersey Family Health Consortium - Maternal Child Health | 20 | NJ Transit Representative | 1 |
| Emergency Medical Service Representatives (Montgomery EMS, Burlington County, Somerset County) | 3 | Penn Medicine Princeton Health CEO | 1 |
| Geriatric Steering Committee | 9 | Penn Medicine Princeton Health Human Resources Representative | 1 |
| LGBTQ+ Community Members | 6 | Princeton Community Housing Leaders | 2 |
| Life Tree Community Church | 7 | Princeton House Behavioral Health Vice Presidents | 2 |
| Local Health Officers | 6 | Womanspace Counseling Representatives | 2 |

| Penn Medicine Princeton Health CHNA Community Advisory Board Members | 11 | | |
| Penn Medicine Princeton Health Patient & Family Advisory Council | 7 | | |
| Robbinsville School District | 4 | | |
| Trenton Douglas | 5 | | |

Community Contribution Findings

Both the community survey and qualitative discussions identified similar themes regarding strengths and challenges for the communities served by Princeton Health.

COMMUNITY STRENGTHS

Major strengths for the overall service area include:

- Access to medical care**
 86.2% of survey respondents named access to medical care as a perceived strength of the community, sharing that access to mental health services, hospital care, and municipal services such as 911 are strong in the community.
- Access to resources**
 74.1% of survey respondents described access to resources as a strength of their community. The community discussions also shared this theme describing good access to healthcare resources, community spaces, recreation, transportation, and educational opportunities.
- Diversity within the community**
 72.3% of survey respondents indicated that a perceived strength in their community was the diversity that exists. Diversity was also described as an asset in many of the community discussions.
- People in the community speak the same language**
 60.4% of the survey respondents indicated that people in their community speak the same language. Both the survey and community discussions describe tremendous cultural diversity in the service area and a strong sense of community among those who speak languages in addition to English.
- Pride in the community**
 59.5% of survey respondents described having pride in their community. Pride in the community was also described in the community discussions as a key community asset. Community discussion participants indicated that there is strong interconnectedness and social networks in the community. They also described their community as active and engaged and “coming together despite differences”.

Note that there were differences in perceived strengths by demographic indicators and specific geographic location within the service area. For example, although 88.9% of total survey respondents indicated that they had good access to resources, only 46.4% of Hispanic respondents shared the same perception. For additional information on survey responses by demographics, please refer to the Appendix, page 62. Specific perceptions by geographic area are described in greater detail in the Community Health Indicators section.

COMMUNITY CHALLENGES

Major challenges identified by both the survey and community discussion participants include:

- **Social needs**
Access to affordable housing was selected by **53%** of survey respondents as a community challenge. This percentage rises to 64.3% for Hispanic respondents. Affordable housing was identified as a community challenge in at least 11 of the 21 community discussions. Other social needs selected as challenges by survey respondents, include: good jobs (29.4% for overall, 50% for Hispanic respondents), and public transportation (41.5% of survey respondents selected this). Transportation challenges were identified in over half of the community discussions.
- **Support for the aging population**
47.7% of survey respondents identified the need to offer services to help older adults stay in their homes, and 38.3% indicated expansion of health services for older adults is needed. Community discussion participants also described affordable housing, food and transportation for seniors as challenges in the community.
- **Availability of mental health services**
43.4% of survey respondents described mental health as a major priority for the community and 25.4% described difficulty in accessing mental health services. Community discussion participants also noted that finding mental health services for adolescents and youth is challenging, with this theme being mentioned in over half of the community discussions.
- **Availability of supermarkets and healthy food options**
37.5% of overall survey respondents shared that availability of supermarkets and healthy, affordable food options are a challenge in the community. Food insecurity and food deserts were described in several community discussion settings.
- **Availability of programs to address chronic disease prevention, improving physical activity, and obesity**
36.4% of total respondents describe overweight or obesity as a community health issue, versus 47.1% of black respondents. 35% of survey respondents indicated that a priority for the community is to offer more programs focusing on physical activity and nutrition. Similarly, offering programs focused on prevention of chronic diseases was a priority for 34.1% and programs for weight control was a priority for 33.9%. These themes were echoed in the community discussions with several participants describing a lack of programs and walkability in the community as challenges.
- **Barriers to access services and care**
18.2% of survey respondents indicated that specialty care is difficult to access. Community discussion participants also revealed that it is difficult to find providers who accept Medicare/Medicaid. Additionally, transportation to medical services was described as a barrier to care. 73.6% of survey respondents described long wait times for appointments as another barrier to care. Costs of care and prescriptions were also mentioned among community discussions participants.

Note that there were differences in perceived challenges by demographic indicators and specific geographic location within the service area. For example, 53% of total survey respondents indicated that affordable housing is a challenge in the community. However, this percentage rises to 64.3% of Hispanic respondents. For additional information on survey responses by demographics, please refer to the Appendix, page 62. Specific perceptions by geographic area are described in greater detail in the Community Health Indicators section.

OTHER KEY FINDINGS

There were other notable findings and themes from both the survey and community discussions. These include:

- **Perceived health of the community**

The community survey asked respondents their perception of how healthy the community is. 14.5% responded that the community is in excellent health. This is a slight decrease from 2021 when respondents indicated that 15.8% of the community is in excellent health. In 2024, 42.6% described health as very good, 35.9% as good, 6.3% as fair, and 0.6% as poor. Respectively, in 2021, 37.6% described health as very good, 36.6% as good, 8.3% as fair, and 1.2% as poor.

- **Good paying jobs**

29.4% of total survey respondents identified good paying jobs as a challenge in the community, while 50% of Hispanic respondents selected this as a challenge. Economic factors, cost of living, and good paying jobs were identified in several community discussions as community challenges.

- **Discrimination**

52.9% of African American respondents, 53.6% of Hispanic respondents, and 48.4% of South Asian respondents described being discriminated against because of their race or ethnicity. Conversely, only 4.4% of white respondents indicated being discriminated against. 46.4% of Hispanic respondents indicated that they had been discriminated against due to their language. Community discussion participants described a lack of access to services, programs, and providers for Spanish speaking adults and youth. 36.4% of African American respondents, 24.7% of white respondents, and 42.9% of Hispanic respondents indicated being discriminated against due to their type of health insurance.

For all survey and community discussion results, please refer to the Appendix, page 62.

Spotlight Topics

In an effort to gain additional information about topics identified by the CAB as high priority, and to gain a deeper understanding of community health needs, Princeton Health engaged in several discussions with community partners and leaders. Summaries of these discussions are provided below.

Municipal, Community Services & Community Representatives

Community conversations were held with a number of individuals representing municipal and community services from the service area, such as health officers, the faith-based community, food security leaders, and school district leaders. Additionally, members of the general community were included in these discussions. The following groups participated in the conversations:

- Local Emergency Medical Technicians – 3 participants
- Faith-Based Organizations – 7 participants
- Local Health Officers - 6 participants
- Mercer County Community Board Members – 3 participants
- Mercer County Food Security Leaders – 5 participants
- Princeton Health CHNA Community Advisory Board – 11 participants
- Princeton Health Patient & Family Advisory Council – 7 participants
- Robbinsville School District – 4 participants

STRENGTHS

A major theme from these discussions was the strong interconnectedness and diversity of the community. Participants discussed active and involved communities, availability of resources, and strong engagement among community members. Many participants acknowledged the proximity to larger urban areas such as Philadelphia and New York City. Other identified strengths include the high educational level and good educational resources in the community, access to parks and recreation, and coordination among nonprofit organizations.

CHALLENGES

Community challenges which were shared in the community conversations include: lack of affordable housing, not enough mental health services, a growing need for social services, food insecurity and access to nutritious foods, and long wait times for medical and other services. It was also expressed that there is a lack of trees in lower income neighborhoods, creating heat islands which exacerbate respiratory illnesses.

TOP HEALTH CONCERNS

Participants in this group were asked what their top three most pressing health concerns are in the community. Several participants described teen and adult mental health as a top concern. Additionally, lack of support and resources for the aging population and access to affordable and nutritious foods were mentioned. Participants also shared concerns about isolation, loneliness, and challenges with physical health among the older population. Drug misuse and substance use disorders were also described as a top health concern in the community.

BARRIERS, GAPS, AND LIMITATIONS IN ACCESS TO HEALTHCARE

Participants described several gaps in access to healthcare. These include: a lack of multi-language services and culturally appropriate care in some of the more diverse communities, such as Hispanic and South Asian. Additionally, the cost of services and resources in the community poses major barriers to care. Participants also identified lack of transportation to medical appointments as a significant limitation.

Housing

Key informant interviews were held with two leaders from Princeton Community Housing, a non-profit community-based organization which manages and advocates for safe, affordable housing in the Mercer County region.

CHALLENGES

They described housing, food insecurity, behavioral health, and access to services for seniors as being some of the community's biggest challenges. Additionally, they indicated that community members may not be aware of resources and services and have challenges with completing social service applications such as Medicaid, rental assistance, and food assistance.

LGBTQ+ Health

Six members of the LGBTQ+ community participated in a community conversation to discuss their community's health needs and concerns.

STRENGTHS

The participants described a strong and resilient community and noted that New Jersey is a progressive state that values civil rights and diversity.

CHALLENGES

The participants also described a variety of concerns and challenges. They described a lack of knowledge of existing programs and challenges with navigating resources in the community. They also described concerns about homeless LGBTQ+ community members and difficulty with finding housing and jobs without a street address. They also expressed challenges related to costs of care and long wait times for mental health services.

TOP HEALTH CONCERNS

The participants indicated that it is challenging to find gender-affirming care or LGBTQ+ friendly practices. They shared that it can feel difficult to talk about certain LGBTQ+-related issues with providers. Other health concerns include mental health, diabetes, healthy eating and cancer.

Maternal Health

Several individuals representing maternal/child health organizations participated in community conversations. They include individuals from support groups for new mothers and babies up to the age of one, a family resource organization, and doulas providing physical, emotional and educational support to mothers and babies.

- Breastfeeding Support Group – 9 participants
- Bright Beginnings – 8 participants
- Central Jersey Family Health Consortium - Maternal Child Health – 20 participants
- Trenton Doulas – 5 participants

STRENGTHS

The participants in these conversations described several strengths of the community, including access to many resources and services, a family-oriented community, and access to outdoor recreation, parks, and libraries.

CHALLENGES

Some of the biggest community challenges described by the participants include high costs of living, lack of transportation to access services, unsafe housing and food deserts. They also described a lack of culturally appropriate care and language access as challenges to medical care. Some participants expressed concern about environmental issues, such as exposure to toxins and increasing heat, especially while pregnant.

TOP HEALTH CONCERNS

The participants described long wait times for specialists and issues/stigma associated with mental health and postpartum depression. They also shared that there is a lack of interpreter services which creates language barriers. Additionally, they described domestic violence, neglect and abuse of children, and discrimination as challenges in the community.

BARRIERS, GAPS, AND LIMITATIONS IN ACCESS TO HEALTHCARE

The participants identified several barriers to care. These include the costs associated with resources and services, such as food, medications, diapers, education, and childcare. Although programs and resources may be available, there is a lack of coordination among public services and it is challenging to navigate these resources. They also identified insurance coverage as a major challenge. The participants indicated that there is limited access to care when pregnant. Services such as free-standing birth centers, doulas, breastfeeding support, and certified nurse midwives are not available in the community or are currently overwhelmed and unable to keep up with the demand of the increasing population.

Mental and Behavioral Health

Representatives from organizations representing the mental and behavioral health community were included in discussions to better understand and prioritize mental health needs. These include:

- Princeton House Behavioral Health Vice Presidents – 2 participants
- Womanspace Counseling – 2 participants

STRENGTHS

Representatives from these organizations described the community as being small, diverse, and having a strong sense of community.

CHALLENGES

The participants noted several community challenges, such as costs of care, difficulty in accessing affordable food, poverty, and mental health.

TOP HEALTH CONCERNS

Participants described numerous health-related challenges including increases in eating disorders, vaping, cocaine use, and a lack of mental health providers. They also mentioned high staff turnover rates and challenges in accessing mental health services. Regarding climate issues, participants cited increases in domestic violence during heatwaves.

Older Adults

Nine members of Princeton Health's Geriatric Steering Committee participated in a discussion about the needs for older adults in the community. However, these findings are also informed by several other community conversations which described concerns about the health and well-being of older adults in the community.

CHALLENGES

Community challenges described by participants pertaining to older adults include concerns about costs of living and housing, issues with older adults living alone, and lack of access to specialists. They also expressed concerns about isolation and loneliness, as well as lack of social support.

TOP HEALTH CONCERNS

The top health concerns identified by participants include psychiatric and mental health issues. Additionally, they noted a lack of support for caregivers, especially for those in the sandwich generation who are simultaneously caring for aging parents and children. They also described challenges with providing palliative care and having goals of care conversations with older adults. Pertaining to climate concerns, participants shared that older adults may experience increased difficulties with asthma and allergies during heat waves, particularly if they are lacking air conditioning in their homes.

BARRIERS, GAPS, AND LIMITATIONS IN ACCESS TO HEALTHCARE

Participants in these discussions described language and cultural barriers as challenges for older adults, as well as navigating the healthcare system, digital health access, and transitions of care. According to the participants, older adults also have challenges with understanding follow-up care and communicating with their care team.

Transportation

Community conversations were held with leaders representing transit and transportation organizations, including:

- Greater Mercer Transportation Management Association (TMA) – 2 participants
- New Jersey Transit Leader – 1 participant

STRENGTHS

Community strengths described by participants include transportation for seniors, collaboration with cancer centers and access to multiple transportation options.

CHALLENGES

Community challenges noted by participants include the fact that significant portions of the population are in need. They described difficulty keeping up with infrastructure demands (such as fire and police services). They also noted that homelessness is a challenge and transit facilities become homes to the unhoused.

TOP HEALTH CONCERNS

Access to healthy food and transportation gaps were mentioned as top health concerns. Additionally, the participants described a lack of understanding of available services and community safety as concerns for the community.

BARRIERS, GAPS, AND LIMITATIONS IN ACCESS TO HEALTHCARE

Participants indicated that paratransit can be very expensive and a lack of regular bus routes in certain areas can limit access to healthcare.

Princeton Health Representatives

Key informant interviews were held with Princeton Health’s Chief Executive Officer and a representative from Human Resources.

STRENGTHS

They noted strengths of the community as strong diversity among employees, and services for diverse populations, including the LGBTQ+ community.

CHALLENGES

The interviews revealed that some of the challenges within the community include barriers to transportation, food insecurity, acute management of disease instead of prevention, and mental health. They also noted that affordable housing is a community challenge.

TOP HEALTH CONCERNS

Top health concerns identified in the interviews include mental health among the younger population and pockets of chronic illness in the Southeast Asian and African American communities.

BARRIERS, GAPS, AND LIMITATIONS IN ACCESS TO HEALTHCARE

The participants noted a variety of barriers in access to healthcare. These include lack of health services available on weekends, challenges in obtaining medical appointments, and workforce shortages. They also expressed that people have been putting off care since the pandemic. This has caused individuals to avoid seeking primary and preventive care and has increased utilization of the emergency room.

Vision for the Future

Bright Beginnings Halloween Party

Despite challenges identified by the community conversation participants, they also were hopeful for the future of their community.

They described a future vision which includes:

- Greater resources to address community needs
- Easier access to services and resources
- Improving stigma and resources related to mental health
- Increase in healthy eating and physical activity
- Improved resources to meet basic needs of the most vulnerable
- LGBTQ+ specific health services
- Improved language services and support for immigrants and cultural diversity
- Safe neighborhoods and greener, open spaces
- Affordable housing and lower cost of living
- Increase in transportation options
- Access to best in class, and compassionate care
- Age friendly and person-centered care
- More support groups, providers, and greater access to care for pregnant people

Community Health Priorities

Priority health needs for the Princeton Health service area were chosen based on a combination of data inputs, including community survey responses, qualitative discussions with community members and representatives, contributions from Community Advisory Board members based on qualitative feedback, and quantitative health indicators. In the community survey, respondents were instructed to respond to a question identifying whether specific community health concerns were high priority, medium, or low. Additionally, the Community Wellness Program team worked with the CAB to identify topics that were identified to be high priority by the communities the representatives serve. Priorities were also identified by the frequency of mentions in discussion groups and the level of concern shared by participants. Finally, quantitative community health indicators for the service area were evaluated. Based on these inputs, a list of priorities was developed. Through a modified Hanlon process, the topics continued to be re-prioritized by consensus of the CAB until a list of the six highest priorities for the service area were selected.

HEALTHY AGING

POPULATION IMPACTED

Percent of the population 65+

New Jersey

16.5%

Mercer/Middlesex/Somerset

15.7%

KEY FINDINGS

Community Survey

- **47.2%** of respondents selected “Increasing the number of services to help seniors stay in their homes” as a **HIGH** priority issue in their community
- **38.3%** of respondents selected “Expanding health and medical services focused on seniors” as a **HIGH** priority issues in their community

Community Discussions

- **23:** The number of times aging related topics were mentioned
- Topics related to isolation, loneliness, aging in place — particularly as it relates to housing affordability — were most commonly mentioned
- Concerns regarding extreme weather were brought up as older adults are less likely to leave their house or engage with their community as temperatures rise, rain/snow, or experience other extreme weather events

Additional Data

- According to the New Jersey State Strategic Plan on Aging, 2021-2025:¹
- From 2010 to 2019, the percentage of New Jersey residents ages 60 and older rose 24.7%
 - The population over age 60 is projected to continue to grow substantially, surpassing the number of school-age children by 2030

POTENTIAL SOLUTIONS

- Increase the focus on engaging older adults in activities outside the home to increase social connections, community engagement and physical activities
- Activate existing community and/or senior centers
- Increase quantity and quality of affordable housing for older adults
- Develop or increase existing resources for the “sandwich” generation
- Sandwich generation is not a specific generation, but rather a phenomenon that can affect anyone who has both children and aging parents who need support; currently primarily associated with Generation X
- Support younger generations to prepare for healthy aging – screenings & prevention, financial planning, medical directives, etc.

MENTAL & BEHAVIORAL HEALTH

POPULATION IMPACTED

Percent of adults who reported poor mental health 14 or more days in the past month

New Jersey

10.0%

Mercer/Middlesex/Somerset

12.1%

KEY FINDINGS

Community Survey

- **43.4%** of respondents selected “Providing more counseling or mental health services” as a **HIGH** priority issue in their community
- **25.4%** of respondents selected “Counseling/mental health care for ADULTS” as one of the **MOST DIFFICULT** resources to access; and 22.9% selected the same for YOUTH

Community Discussions

- **55:** The number of times mental & behavioral health were mentioned
- Populations particularly impacted: older adults and youth
- Lack of availability of providers, long wait times continue to be a challenge across all communities
- Participants mentioned stigma related to acknowledging or seeking mental health support, which can be particularly prevalent in some immigrant communities
- Increased usage of, and reliance on, social media is negatively impacting youth, especially as it relates to the pandemic (bullying, insecurities, decreased attention spans)
- Participants expressed concerns related to isolation and loneliness because of the pandemic, particularly with older adults

Additional Data

- According to the New Jersey Department of Children and Families, suicide is the 3rd leading cause of death for New Jersey youth between 10 and 24 years old; however, the overall rate of youth suicide in the state is low when compared to national rates overall.²
- Results from a survey conducted in June 2024 by The Health Management Academy & Public Opinion Strategies of 1,000 registered voters, showed that **60%** of respondents believe that “expanding behavioral and mental health care across the community” is **VERY IMPORTANT**.

POTENTIAL SOLUTIONS

- Decrease wait time to see providers; increase number of providers
- Focus on culturally diverse services and providers — ex. LGBTQ+ affirming- providers
- Better coordination of after care when patients leave the hospital
- Offer mental health first aid training and programming — schools, health care staff, first responders, etc.
- Focus education and programming on reducing stigma related to mental health — particularly across diverse cultures and generations
- Expand psychiatry unit — EMTs are often diverting to other locations
- Increase collaboration between schools and health care providers to support youth mental health
- Services should be considered for the long-term, not “applied like band-aids”

HOUSING

POPULATION IMPACTED

Households where housing costs are 30% or more of household income

| New Jersey | | Mercer/Middlesex/Somerset | |
|--------------|--------------|---------------------------|--------------|
| Owners: | Renters: | Owners: | Renters: |
| 32.8% | 48.3% | 27.6% | 47.5% |

KEY FINDINGS

Community Survey

- **53%** of respondents selected “Affordable housing” as one of the **MOST DIFFICULT** resources to access
- **41.7%** of respondents selected “Increasing access and availability to safe and affordable housing” as a **HIGH** priority issue in their community

Community Discussions

- **19:** The number of times housing was mentioned
- Housing was most frequently mentioned in connection to issues related to affordability
- Participants indicated increase in “trade-offs” — foregoing food or other necessities due to housing costs
- Participants expressed that without a permanent address, it can be challenging to find employment, qualify for services, maintain good health
- Perceived increase in homelessness — particularly among LGBTQ+ individuals, those struggling with mental or behavioral health, and/or substance use disorders

Additional Data

- According to the National Low Income Housing Coalition, in New Jersey, there is a shortage of **214,475** affordable and available rental homes for extremely low-income renters.³
- According to a Rutgers Health Center for State Health Policy report, 67.8% and 69.7% of people experiencing homelessness are also covered by Medicaid in Somerset and Mercer counties, respectively (Middlesex was not included in the report). There is also a high prevalence of behavioral health (serious mental illness, substance use disorder) and other chronic condition diagnoses among people experiencing homelessness in both counties.⁴

POTENTIAL SOLUTIONS

No solutions were proposed related to housing as part of the community discussions — in the absence of this, relevant evidence-based examples are included below:

A 2018 study conducted by the Urban Institute, “Affordable Housing Investment: A Guide for Nonprofit Hospitals and Health Systems,” lists the following mechanisms for how hospitals can invest and support affordable housing:

- Hospitals donations of land or buildings — particularly those that are unused or underutilized
- Loan guarantees for affordable housing developers
- Providing loans or investments directly to affordable housing developers (i.e. through a community development financial institution)⁵

A 2022 report from the Rutgers School of Planning and Public Policy, “Health, Hospitals and Affordable Housing: National and New Jersey Perspectives,” highlights case studies of hospitals engaging and investment in affordable housing in New Jersey.⁶

- In 2018, the New Jersey Housing and Mortgage Finance Agency (NJHMFA) launched the Housing Partnership Subsidy Program (HPSP), aimed at “encouraging hospitals to invest in affordable housing in their local communities” by offering funds, which can be matched by hospitals, to offset costs related to development and construction (hospitals could also provide land or buildings as part of the project).
- Through this program, St. Joseph’s Hospital in Paterson, New Jersey partnered with the New Jersey Community Development Corporation (NJCDC) and New Jersey Community Capital to construct multi-family supportive housing within close proximity to the hospital. Opened in 2023, the housing complex features 56 subsidized units, 10 of which are reserved for patients with mental illnesses.

ECONOMIC SECURITY & ACCESS TO CARE

POPULATION IMPACTED

Percent of Families Living in Poverty

New Jersey

Mercer/Middlesex/Somerset

6.9%

5.7%

KEY FINDINGS

Community Survey

- Top **HIGH** priority issues in the community included: Expanding the health and medical services available to low-income individuals (39%), increasing the availability of safe, stable, well-compensated work for all people (39%), and increasing the quality of educational opportunities for all people (36.6%)
- **29.4%** of respondents selected “Good paying jobs” as one of the **MOST DIFFICULT** resources to access

Community Discussions

- **34:** The number of times economic and access to care topics were mentioned during the community discussions
- Increased cost of living was one of the most frequent comments
- Participants shared experiences related to feeling “less than” or “just a number” based on income or type of insurance

Additional Data

- Percent of the population without insurance
New Jersey: 7.4%
Mercer/Middlesex/Somerset: 6.55%
- The percent of “low-wage” jobs in New Jersey grew 19% between 1990-2021, compared to growth in middle- (8%) and high- (8%) wage jobs
- Results from a survey conducted in June 2024 by The Health Management Academy & Public Opinion Strategies of 1,000 registered voters, showed that 60% of respondents believe that “providing care for low-income residents through the state’s Medicaid program” is **VERY IMPORTANT**.

POTENTIAL SOLUTIONS

- Offer education related to “financial” health
- Increase acceptance of Medicaid and Medicare, offer more low to no-cost care; consider sliding scale options
- Develop or enhance care navigation programs to support people in accessing services and understanding the resources and services available to the public — especially those for low-income individuals and families
- Offer increased transportation options to medical facilities
- Increase availability of wraparound or integrated services as people often need more than one service

FOOD & NUTRITION EQUITY & ACCESS

POPULATION IMPACTED

Percent of households receiving SNAP benefits

New Jersey

Mercer/Middlesex/Somerset

9.5%

7.7%

KEY FINDINGS

Community Survey

- **23.3%** of respondents selected “Affordable healthy food” as one of the **MOST DIFFICULT** resources to access
- **24.1%** of respondents selected “Access to fresh foods” as a community health issue

Community Discussions

- **32:** The number of times food access and nutrition topics were mentioned
- Participants expressed concerns related to the increasing cost of food
- Participants indicated that accessibility to grocery stores is a challenge — public transit is not comprehensive enough, decrease in older adults driving and decrease in younger population owning cars
- Challenges with confusing food assistance applications was also discussed
- The regional population diversity has resulted in diverse food options
- Students are experiencing more societal and educational pressure and increasing consumption of caffeinated drinks, reducing healthy food consumption, and experiencing increase in eating disorders as a result

Additional Data

- **26.1** – the rate of grocery stores and supermarkets per 100,000 people in New Jersey
- **10.7%** of the New Jersey population is food insecure
 - In 2018, 8.7% of the population was food insecure
 - Rates are also much higher for the Black and Latino population (21% and 20%, respectively)

POTENTIAL SOLUTIONS

- Offer nutrition education and financial incentives to buy fresh fruits and vegetables
- Offer more community cooking and nutrition education; consider culturally specific nutrition and food education classes

CHRONIC DISEASE PREVENTION & MANAGEMENT

POPULATION IMPACTED

New Jersey & Mercer/Middlesex/Somerset

LEADING CAUSES OF DEATH

- o Heart Disease
- o Cancer
- o COVID-19
- o Unintentional Injury
- o Stroke

KEY FINDINGS

Community Survey

- **34.3%** of respondents selected “Offering more programs and services focused on physical activity, nutrition, chronic disease prevention, and weight control” as a community priority
- **9.8%** of respondents selected “Health screenings and treatment for chronic conditions” one of the **MOST DIFFICULT** healthcare services to access

Community Discussions

- **48:** The number of times chronic disease related topics were mentioned during the community discussions
- Participants expressed concerns regarding chronic disease but also indicated that other concerns related to mental health, finances, transportation, are becoming more prominent and diminishing the focus on chronic disease prevention
- Students are increasingly using vapes and consuming marijuana
- Participants mentioned concerns related to smoking and lung cancer, particularly within the South Asian population

Additional Data

- Results from a survey conducted in June 2024 by The Health Management Academy & Public Opinion Strategies of 1,000 registered voters, showed that **62%** of respondents believe that “preventative care and wellness programs to help improve the health of the community” is **VERY IMPORTANT.**

POTENTIAL SOLUTIONS

- Offer nutrition education and financial incentive to buy fresh fruits and vegetables
- Offer educational programming and materials at places of worship
- Increase awareness of and access to screenings — mobile units, pop-up programming

Conclusion

In conclusion, the Princeton Health service area comprises a culturally and economically diverse region with numerous attributes, including strength of community pride and engagement, access to resources and entertainment, and access to healthcare services.

The service area also experiences challenges associated with wealth differentials in the region, such as a lack of affordable housing, access to good paying jobs, and access to healthy and affordable foods. These challenges contribute to a variety of health priorities and needs among the community Princeton Health serves.

Based on the community survey results, discussions with community-based representatives, and other community-specific data, the following top health priorities were identified:

- **Healthy aging**
- **Mental health**
- **Affordable housing**
- **Economic stability**
- **Food and nutrition**
- **Chronic diseases**

These priorities are similar to those identified in 2021, demonstrating the intractability of these issues. However, Princeton Health remains steadfast in its commitment to addressing these priorities. They will be included in a formal implementation plan identifying activities and initiatives Princeton Health will implement over the next three years. Milestones associated with the initiatives will be tracked and presented to Princeton Health's Board of Directors on a regular basis. Initiatives will continue to be carried out by Princeton Health's Community Wellness Program team, as well as other dedicated partners in the service area.

Notes: Only crude rates are reported.

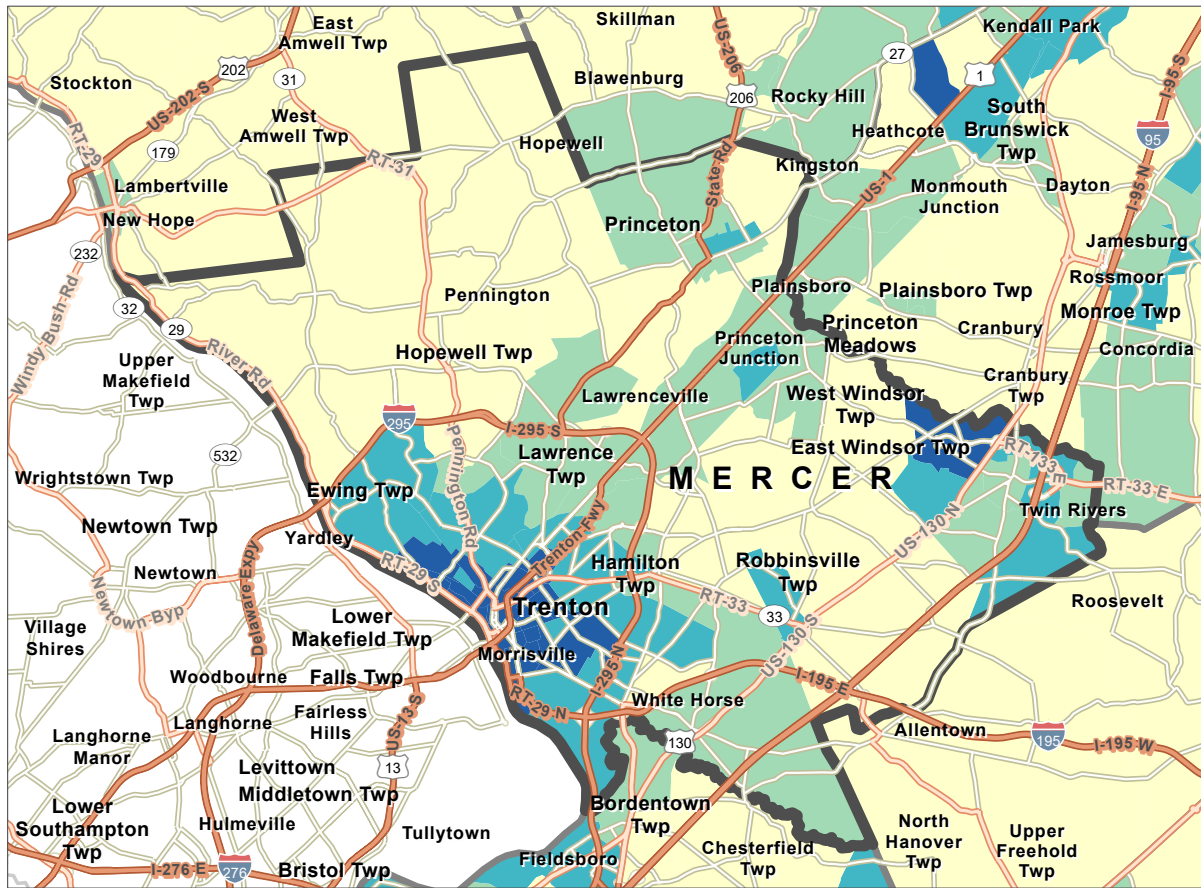

Publicly reported data were only available at the county level within Mercer, Middlesex, and Somerset Counties. However, Princeton Health may only serve certain ZIP codes within these counties, and not the full counties.

County-level Social Vulnerability Index Reports: Mercer County

CDC/ATSDR Social Vulnerability Index 2022

MERCER COUNTY, NEW JERSEY

Overall Social Vulnerability¹

Social vulnerability refers to a community's capacity to prepare for and respond to the stress of hazardous events ranging from natural disasters, such as tornadoes or disease outbreaks, to human-caused threats, such as toxic chemical spills. The **CDC/ATSDR Social Vulnerability Index (CDC/ATSDR SVI 2022)⁴ County Map** depicts the social vulnerability of communities, at census tract level, within a specified

county. CDC/ATSDR SVI 2022 groups **sixteen census-derived factors** into **four themes** that summarize the extent to which the area is socially vulnerable to disaster. The factors include economic data as well as data regarding education, family characteristics, housing, language ability, ethnicity, and vehicle access. Overall Social Vulnerability combines all the variables to provide a comprehensive assessment.

County-level Social Vulnerability Index Reports: Mercer County

CDC/ATSDR SVI 2022 – MERCER COUNTY, NEW JERSEY

County-level Social Vulnerability Index Reports: Middlesex County

CDC/ATSDR Social Vulnerability Index 2022

MIDDLESEX COUNTY, NEW JERSEY

Overall Social Vulnerability¹

Social vulnerability refers to a community's capacity to prepare for and respond to the stress of hazardous events ranging from natural disasters, such as tornadoes or disease outbreaks, to human-caused threats, such as toxic chemical spills. The **CDC/ATSDR Social Vulnerability Index (CDC/ATSDR SVI 2022)**⁴ **County Map** depicts the social vulnerability of communities, at census tract level, within a specified

county. CDC/ATSDR SVI 2022 groups **sixteen census-derived factors** into **four themes** that summarize the extent to which the area is socially vulnerable to disaster. The factors include economic data as well as data regarding education, family characteristics, housing, language ability, ethnicity, and vehicle access. Overall Social Vulnerability combines all the variables to provide a comprehensive assessment.

Community Health Needs Assessment Survey

2024 COMMUNITY HEALTH NEEDS ASSESSMENT SURVEY

Health and wellness matters to everyone. That's why Penn Medicine Princeton Health wants to know how health and wellness programs and services can best serve area residents, and we want you to be part of that planning.

We are asking people who live or work in **Somerset, Mercer, and Middlesex** counties for feedback and suggestions about health services and issues in your county by completing this 10-15 minute survey by **June 1, 2024**. All responses are completely anonymous. There are no right or wrong answers; it's your opinion that matters!

Your feedback is valuable since the information gathered from this survey will be used to guide future health programming and services in this region.

Thank you for your participation.

What To Do When You're Done.

Once you complete the survey, please mail it to:

Debbie Millar

Community Wellness

731 Alexander Road, Suite 103

Princeton, NJ 08540

1. What is the zip code where you live? ____ _
2. What is the zip code where you work, volunteer, worship, or go to school (if applicable)?
If more than one applies, choose the zip code where you work. ____ _

Community Health

3. In general, how would you describe the overall health of the following?

| | Excellent | Very Good | Good | Fair | Poor |
|--|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|
| The community in which you live | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| The community in which you work, volunteer, worship, or go to school (if applicable) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

4. What do you see as the **strengths** of your community or neighborhood (Somerset, Mercer, and Middlesex)?
(Please check all that apply.)

- My community is close to medical services
- My community has good access to resources
- My community has people of many races and cultures
- People speak my language
- People accept others who are different than themselves
- People care about improving their community
- People are proud of their community
- People feel like they belong in this community
- People like to work together in this community
- People can deal with challenges in this community
- There are innovation and new ideas in my community
- None of the above

5. Please select the **TOP 5 HEALTH ISSUES** impacting you or your family personally and the community in which you live. Please select 5 health issues FOR EACH column below. You can select the same or different issues for each.

| | You/Your family | Community where you live |
|--|--------------------------|--------------------------|
| Access to health care services | <input type="checkbox"/> | <input type="checkbox"/> |
| Access to safe, affordable housing | <input type="checkbox"/> | <input type="checkbox"/> |
| Access to fresh foods (e.g. fruits, vegetables) | <input type="checkbox"/> | <input type="checkbox"/> |
| Aging health concerns (e.g. Alzheimer's, dementia) | <input type="checkbox"/> | <input type="checkbox"/> |
| Alcohol use/substance use disorder | <input type="checkbox"/> | <input type="checkbox"/> |
| Asthma | <input type="checkbox"/> | <input type="checkbox"/> |
| Cancer | <input type="checkbox"/> | <input type="checkbox"/> |
| Caregiving (e.g. elder care, child care) | <input type="checkbox"/> | <input type="checkbox"/> |
| Children's health concerns (ages 0 to 18 years old) | <input type="checkbox"/> | <input type="checkbox"/> |
| Chronic disease (e.g. diabetes, heart disease, hypertension) | <input type="checkbox"/> | <input type="checkbox"/> |
| Community violence (e.g. gangs, street crime) | <input type="checkbox"/> | <input type="checkbox"/> |
| Dental and oral health | <input type="checkbox"/> | <input type="checkbox"/> |
| Eating Disorders | <input type="checkbox"/> | <input type="checkbox"/> |
| Infectious/contagious disease (e.g. COVID-19, tuberculosis, pertussis, pneumonia, flu) | <input type="checkbox"/> | <input type="checkbox"/> |

| | | |
|--|--------------------------|--------------------------|
| Injuries (e.g. car accidents, falls, concussion) | <input type="checkbox"/> | <input type="checkbox"/> |
| Interpersonal violence (e.g. domestic violence, sexual violence, bullying) | <input type="checkbox"/> | <input type="checkbox"/> |
| LGBTQ health concerns | <input type="checkbox"/> | <input type="checkbox"/> |
| Mental health issues (e.g. anxiety, depression, suicide) | <input type="checkbox"/> | <input type="checkbox"/> |
| Men’s health issues (e.g. prostate) | <input type="checkbox"/> | <input type="checkbox"/> |
| Musculoskeletal issues (e.g. joint pain, arthritis) | <input type="checkbox"/> | <input type="checkbox"/> |
| Neurodivergent issues (e.g. autism, ADHD, learning disability, Tourette’s) | <input type="checkbox"/> | <input type="checkbox"/> |
| Neuroscience issues (e.g. epilepsy, seizures) | <input type="checkbox"/> | <input type="checkbox"/> |
| Overweight or obesity | <input type="checkbox"/> | <input type="checkbox"/> |
| Sexually transmitted infections (e.g. HIV/AIDS, chlamydia, gonorrhea) | <input type="checkbox"/> | <input type="checkbox"/> |
| Unintended pregnancy | <input type="checkbox"/> | <input type="checkbox"/> |
| Women’s health issues (e.g., reproductive health, etc.) | <input type="checkbox"/> | <input type="checkbox"/> |
| Other (please specify): _____ | <input type="checkbox"/> | <input type="checkbox"/> |

Access to Services

6. Please think about the different health care services in your community. How easy or hard is it to access the following services?

| | Very easy | Easy | Not easy or hard | Hard | Very hard | Don’t know |
|--|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|
| Alcohol or drug treatment or prevention services for adults (age 18+) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Alcohol or drug treatment or prevention services for youth (under 18 years) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Cancer care/treatment and screening | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Counseling/mental health care for adults (age 18+) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Counseling/mental health care for youth (under 18 years) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Dental or oral health services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Emergency department services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health or medical services for youth (under 18 years) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health or medical services for seniors (age 65+) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health or medical services for women (e.g. reproductive, breast and pelvic health) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health or medical services for men | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health or medical services for the LGBTQ community | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Health screenings (e.g. cardiovascular, memory, diabetes) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Hospital services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Immunizations (vaccinations) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Occupational therapy | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Outpatient diagnostic services such as lab work or radiology (e.g. X-rays, MRIs) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Physical therapy | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Primary care physicians | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

| | | | | | | |
|--|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|--------------------------|
| Specialty care (e.g. gastroenterologist, cardiologist, endocrinologist, nephrologist, neurologist, etc.) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Urgent care services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Vision services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

7. When trying to get medical care, how often have YOU PERSONALLY felt discriminated against based on any of the following characteristics:

| | Frequently | Sometimes | Never |
|---|--------------------------|--------------------------|--------------------------|
| Your race or ethnicity | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your cultural or religious background | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your language | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your age | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your income | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your body size | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your sexual orientation | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your gender or gender identity | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your disability (if not applicable, select "Never") | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Your type of health insurance | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

8. Have any of these issues made it difficult for you to get needed health services within the last two years? (Please check all that apply.)

- Lack of transportation
- Lack of technology at home
- Lack of technical support (e.g. for telemedicine visits)
- Lack of alternative to electronic communication for seniors
- Lack of accessibility for those with a physical or neurological disability
- Lack of provider or services
- Lack of information or resources/ I don't know what types of services are available
- Lack of offices accepting new patients
- Lack of evening or weekend services
- Long wait for an appointment
- Lack of specialists/specialty care services
- Lack of health insurance coverage
- Cost of care (e.g., deductibles, co-pays)
- Cost of prescription medications
- Language barriers/could not communicate with health provider or office staff
- Unfriendly provider or office staff
- Afraid to have health check-up
- Afraid due to immigration status
- Afraid of discrimination by providers (gender/sex, race/ethnicity, physical appearance/body size, disability)
- I have never experienced any difficulty in getting care

Community Priorities

9. Please check whether you consider these issues to be low, medium, or high priority for future funding and resources in your community.

| | Low | Medium | High |
|--|--------------------------|--------------------------|--------------------------|
| Increasing transportation to area health/medical services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing the health/medical services that are close by and easy to get to | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Providing more language interpretation services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing the number of providers/staff that speak languages other than English | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding programs or services designed to help patients navigate the health care system | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Providing more counseling or mental health services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Providing more alcohol or drug prevention and treatment services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding cancer screening, diagnostics, and treatment services | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services focused on seniors (65+) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing the number of services to help the elderly stay in their homes | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services focused on children and adolescents (under 18 years) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services focused on women's health issues (e.g., pregnancy, well-visits, pelvic health) | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services focused on men's health issues | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services available to low-income individuals | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Expanding the health/medical services available to LBGQT population | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Offering more programs or services focusing on physical activity and/or nutrition | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Offering more programs or services focusing on obesity/weight control | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Offering more programs or services focusing on prevention of chronic diseases like heart disease, diabetes, and stroke | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Offering more programs such as meditation, yoga, mindfulness, and reiki | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Offering more programs or services to help people quit smoking/vaping | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing access and availability to safe and affordable housing | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing availability of sidewalks or parks | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing availability of supermarkets/healthy food options people can afford | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing the availability of safe, stable, well-compensated work for all people | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Increasing the quality of educational opportunities for all people | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |
| Other (please specify): _____ | <input type="checkbox"/> | <input type="checkbox"/> | <input type="checkbox"/> |

Health Coverage and Information

10. Are you personally currently covered by any of the following types of health insurance or health coverage plans? (Check all that apply)

- Insurance through a current or former employer or union (yours or another family member's)
- Insurance purchased directly from an insurance company (by you or another family member) including coverage purchased through a healthcare exchange or marketplace such as 'Get Covered NJ'
- Medicare, for people age 65 and older, or people with certain disabilities
- Medicaid, Medical Assistance (MA), Children's Health Insurance Program (CHIP) or any kind of state or government-sponsored assistance plan based on income or disability (also called 'NJ Family Care')
- Tricare or other military health care, including Veteran's Administration health care
- Any other type of health insurance coverage or health coverage plan
- No insurance, underinsured

11. Which health services have you personally used in the past year? (Check all that apply)

- Primary care services (e.g. annual physical exam)
- Community health center services (e.g. clinic)
- Urgent care
- Emergency services (e.g. emergency room at a hospital)
- Women's health services (e.g., OB/GYN, or reproductive, breast or pelvic health)
- Cancer screenings (e.g. skin, mammograms, prostate exam)
- Cancer care or treatment
- Outpatient services such as blood work or radiology (e.g., X-rays, MRIs)
- Home health care
- Mental health care
- Alcohol/substance abuse treatment
- Tele-health or tele-medicine services
- Did not use health services in the past year

12. What is your MAIN SOURCE of medical care? (Please check one)

- | | |
|--|--|
| <input type="checkbox"/> Private doctor's office or group practice | <input type="checkbox"/> Veteran's Administration facility |
| <input type="checkbox"/> Community health center (i.e. clinic) | <input type="checkbox"/> Tele-health or tele-medicine services |
| <input type="checkbox"/> Emergency room at a hospital | <input type="checkbox"/> Do not have a main source of medical care |
| <input type="checkbox"/> Walk-in medical clinic/urgent care center | <input type="checkbox"/> Other (please specify): _____ |
| <input type="checkbox"/> Free medical program | |

13. Have you ever used an online patient portal to securely access your own or a family member's medical record, lab or radiology reports, medication lists, or other information about health care services received?

- Yes No Don't know/Not sure

14. Have you ever used your mobile device or smartphone to access health care for yourself or a family member, (e.g. virtually talking with your health care provider)?

- Yes (GO TO Q16) No Don't know/Not sure

15. (IF YOU ANSWERED "YES" IN Q14, SKIP TO Q16) Would you be interested in accessing health care for yourself or a family member through your mobile device or smartphone (e.g. virtually talking with your health care provider)?

- Yes No Don't know/Not sure

Demographic Information

The next questions will help us see the range of people who answered this survey. All answers will remain anonymous.

16. What category best describes your age?

- | | |
|--|--|
| <input type="checkbox"/> 18-29 years old | <input type="checkbox"/> 50-64 years old |
| <input type="checkbox"/> 30-39 years old | <input type="checkbox"/> 65-74 years old |
| <input type="checkbox"/> 40-49 years old | <input type="checkbox"/> 75 years old or older |

17. What is your gender?

- | | |
|---|---|
| <input type="checkbox"/> Male | <input type="checkbox"/> Gender neutral |
| <input type="checkbox"/> Female | <input type="checkbox"/> Nonbinary |
| <input type="checkbox"/> Transgender Male | <input type="checkbox"/> Additional Gender Category |
| <input type="checkbox"/> Transgender Female | |

18. How would you describe your ethnic/racial background? (Please check all that apply.)

- | | |
|--|---|
| <input type="checkbox"/> African American/Black | <input type="checkbox"/> Caucasian/White |
| <input type="checkbox"/> East Asian (e.g., Japan, China, Taiwan, Korea, Vietnam, Laos, Cambodia, the Philippines, Samoa) | <input type="checkbox"/> Hispanic/Latino(a) |
| <input type="checkbox"/> Pacific Islander | <input type="checkbox"/> Middle Eastern/North African |
| <input type="checkbox"/> South Asian (e.g., India, Pakistan, Bangladesh, Sri Lanka, Nepal) | <input type="checkbox"/> American Indian/Native American |
| | <input type="checkbox"/> Additional ethnic/racial category (please specify): _____ |

19. What is the primary language you speak at home?

- | | |
|---|--|
| <input type="checkbox"/> English | <input type="checkbox"/> Hindi |
| <input type="checkbox"/> Spanish | <input type="checkbox"/> Telugu |
| <input type="checkbox"/> Chinese (including Mandarin and Cantonese) | <input type="checkbox"/> Nepali/Marathi/Konkani |
| <input type="checkbox"/> Portuguese / Cape Verdean Creole | <input type="checkbox"/> Polish |
| <input type="checkbox"/> Haitian | <input type="checkbox"/> Urdu |
| <input type="checkbox"/> Vietnamese | <input type="checkbox"/> Arabic |
| <input type="checkbox"/> Cambodian/Khmer | <input type="checkbox"/> Korean |
| <input type="checkbox"/> French (including Cajun) | <input type="checkbox"/> Russian |
| <input type="checkbox"/> Tagalog/Filipino | <input type="checkbox"/> Other (please specify): _____ |
| <input type="checkbox"/> Gujarati | |

20. What is the highest level of education that you have completed?

- | | |
|--|--|
| <input type="checkbox"/> None (less than primary) | <input type="checkbox"/> Some college |
| <input type="checkbox"/> Primary or middle school | <input type="checkbox"/> Associate or technical degree/certification |
| <input type="checkbox"/> Some high school | <input type="checkbox"/> College graduate |
| <input type="checkbox"/> High school graduate or GED | <input type="checkbox"/> Graduate or professional degree |

21. Are you the parent of a child under the age of 18?

- Yes No

Thank you for taking this survey! Results will be made available to the community in Fall 2024.

Community Health Needs Assessment Responses

| DEMOGRAPHICS | | n (%) |
|--|---|------------|

Community Input Discussion Guide

Penn Medicine Princeton Health – CHNA Focus Group and Key Leader Guide – General

Goals of the focus group:

- To determine perceptions of the health strengths and needs of Somerset, Middlesex, and Mercer Counties
- To identify the gaps, challenges, and opportunities for addressing community needs more effectively
- To delve deeper into specific areas of interest, including chronic disease, behavioral health, health care access, maternal child health, and elder health

[NOTE: QUESTIONS IN THE FOCUS GROUP GUIDE ARE INTENDED TO SERVE AS A GUIDE, NOT A SCRIPT.]

BACKGROUND (5 minutes)

Hello, my name is _____, and I work for Penn Medicine Princeton Health... Thank you for taking the time to talk with me today. I hope you and your families are fine during these uncertain times.

This discussion will last about 60 minutes. *[DEPENDING ON FORMAT OF FOCUS GROUP]* Please turn on your video, if possible, so that we can all see each other speaking. As a reminder, please keep yourself on MUTE until you want to speak.

We're going to be having a focus group today. Has anyone here been part of a focus group before? You are here because we want to hear your opinions. I want everyone to know there are no right or wrong answers during our discussion. We want to know your opinions, and those opinions might differ. This is fine. Please feel free to share your opinions, both positive and negative.

As is done every few years, Penn Medicine Princeton Health is conducting a comprehensive community health needs assessment effort to gain a greater understanding of the health issues of residents living in Somerset, Middlesex, and Mercer Counties, how those needs and interests are currently being addressed, and whether there might be new and/or different opportunities for the hospital to address these needs.

As part of this process, we are having discussions like these throughout the area with community members, health care providers, and staff from a range of community organizations. We are interested in hearing people's feedback on the strengths and needs of the community and suggestions for the future.

We will be conducting several of these discussion groups around the area. After all the groups are done, we will be writing a summary report of the general opinions that have come up. In that report, we might provide some general information on what we discussed tonight, but I will not

include any names or identifying information. Your responses will be strictly confidential. In the report, nothing you say here will be connected to your name.

Any questions before we begin our introductions and discussion?

INTRODUCTIONS (5 minutes)

Now, first let's spend a little time getting to know one another. When I call your name, please unmute yourself and tell us: 1) Your first name; 2) what city or town you live in; and 3) something about yourself you'd like to share— such as how many children you have or what activities you like to do for fun. *[AFTER ALL PARTICIPANTS INTRODUCE THEMSELVES, MODERATOR TO ANSWER INTRO QUESTIONS]*

COMMUNITY AND HEALTH ISSUES (20 minutes)

Today, we're going to be talking a lot about the community that you live in. How would you describe your community to someone who was thinking about moving there?

What would you say are some of its biggest strengths or the most positive things about it? *[PROBE ON COMMUNITY AND ORGANIZATIONAL ASSETS/STRENGTHS]*

What are some of the biggest problems or concerns in your community? What are the day-to-day challenges that you or your neighbors deal with? *[PROBE ON ISSUES IF NEEDED – transportation; housing; cost of living; social supports; etc.]*

What do you think are the most pressing health concerns in your community? Why?

[IF APPROPRIATE AND NOT YET MENTIONED, PROBE ON: CHRONIC DISEASE INCLUDING CANCER; BEHAVIORAL HEALTH INCLUDING SUBSTANCE USE (OPIOID MISUSE; VAPING AND MARIJUANA AMONG YOUTH); MATERNAL / WOMEN'S HEALTH ISSUES; ELDER HEALTH]

[MODERATOR INSTRUCTIONS: AFTER PARTICIPANTS TALK ABOUT DIFFERENT HEALTH ISSUES, SELECT THE TOP 3 AND ASK THE FOLLOWING SERIES OF QUESTIONS FOR EACH ISSUE.]

- How has *[HEALTH ISSUE]* affected your community? *[PROBE FOR EXAMPLES]*
- Who do you consider to be the populations in the community most vulnerable or at risk for *[THIS CONDITION / ISSUE]*?
- Please tell me a little bit about the trends you see in the community relative to *[health issue]*:
 - What changes in *[HEALTH ISSUE]* have you noticed in the past 3 years?
 - Is *[HEALTH ISSUE]* more or less of an issue than in the past?
- From your experience, what are peoples' biggest challenges to addressing *[THIS ISSUE]*?
 - *[PROBE ON RANGE OF CHALLENGES: E.g., Various barriers to accessing medical and/or preventive care and services, socioeconomic factors, lack of community resources, social/community norms, etc.]*

[IF ACCESS TO HEALTHCARE NOT YET MENTIONED:] What do you see as the strengths of the health care services in your community? What do you see as its limitations?

What challenges have you or someone close to you experienced in trying to get health care? What specifically? *[PROBE FOR BARRIERS: COST, INSURANCE ISSUES, LANGUAGE / CULTURAL BARRIERS, NAVIGATING/COORDINATING CARE, LACK OF TRANSPORTION, CHILD CARE, ETC.]*

- *[NAME BARRIER]* was mentioned as something that made it difficult to get health care. What do you think would help so that people don't experience the same type of problem that you did in getting health care? What would be needed so that this doesn't happen again? *[REPEAT FOR OTHER BARRIERS]*

PROGRAM/SERVICE ENVIRONMENT (20 minutes)

[MODERATOR INSTRUCTIONS: SELECT TOP 3 HEALTH ISSUES DISCUSSED PREVIOUSLY, AND ASK QUESTION 4 FOR EACH ISSUE, ONE AT A TIME.]

Let's talk more about a few of the health issues you mentioned previously. For example, you mentioned *[SELECT HEALTH ISSUE]*.

- What programs, services or policies are you aware of in your community that are working well to address *[SELECT HEALTH ISSUE]*? *[PROBE FOR SPECIFICS - E.G. WHERE COMMUNITY MEMBERS SEEK CANCER SCREENING AND TREATMENT SERVICES; WHERE COMMUNITY MEMBERS SEEK SUBSTANCE USE DISORDER TREATMENT/SERVICES; ETC.]*
- What has been challenging or not working well?
- Where are the gaps? What program, services, or policies are currently not available that you think should be?
- What do you think should happen in your community to try to address this issue?
- Where are there opportunities for improvement in community programs/resources?
- Do you see services/programs currently out there that can be built upon to address these issues? For example, are there current collaborations or initiatives that can be strengthened or expanded?
- What role can Penn Medicine Princeton Health play to address these health issues?

VISION OF COMMUNITY AND PROGRAM/SERVICE ENVIRONMENT (5-8 minutes)

I'd like you to think ahead about the future of your community. When you think about the community 3 years from now, **IN ONE WORD OR PHRASE** what would you like to see? What is your vision for the future?

What do you see as the next steps in helping this vision become reality?

CLOSING (2 minutes)

Thank you so much for your time. That's it for my questions. Is there anything else that you would like to mention that we didn't discuss today?

[INSERT HOW PARTICIPANTS CAN RECEIVE THE FINAL REPORT OR SUMMARY OF THE REPORT].

Thank you again. Have a good afternoon.
